

Do not use value of 'M' or 'Y' in the Reverse Code Field

The R*STARS Data Entry Guide, Chapter 3, On Line Procedures, indicates that a value of 'R', 'M' or 'Y' can be used in the reverse code field (RVS) on transaction entry screens.

Do not use a value of 'M' or 'Y' in the reverse code field. These values were not intended for use in Michigan. Using an incorrect value in this field will cause incorrect posting of data. The only values that should be used are 'R' or spaces.

MAIN staff will provide a future software modification which will eliminate the ability to use incorrect values in the reverse code field.
